DONDOLINO

DONDOLINO

Stability in motion.

Dondolino is a **prone standing frame** designed and built by Ormesa to help children acquire **independence in maintaining a standing posture.**

Dondolino's use in everyday contexts **encourages environmental interaction** by facilitating upper limb and head mobility and the development of individual motor skills.

Dondolino is an extremely versatile tool that comes in three sizes with a wide range of adjustments. It can be used by children and teens from 75 to 150 cm tall, adapting to their growth, development of individual skills and hip and knee movements.

Tilting frame

Through spring stopper adjuster it is possible to switch from the upright position to a more prone one in order to stimulate the active control of the head and trunk.

These changes of attitude can be applied in a completely fluid way even with the child on board, without causing pathological reactions of postural discomfort.

Dondolino contains without forcing, adapting the structure to different postural needs.

Frame

for children needing to improve straightening reactions. Protrusion free to guarantee safety. Allows trunk rotation and maximum upper limb freedom of movement. Smooth continuous adjustment (through spring stopper adjuster).

Tools free

adjustment without tools but with special knobs, designed by Ormesa, with effective and safe grip. The knobs effectively maintain tightening through an internal mechanism that does not mark and ruin the tube.

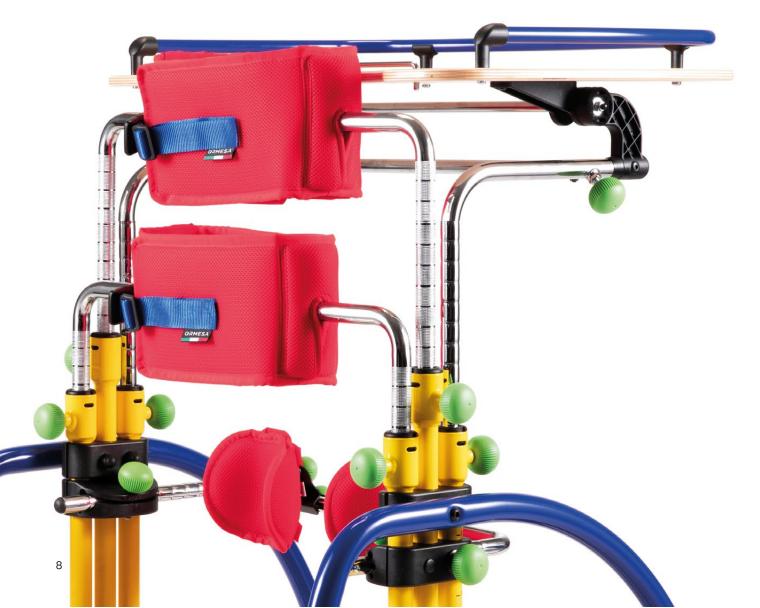

Graduated bars

to help finding the right postural setting chosen by the therapist.

Pelvic support and thoracic support

independently adjustable in circumference, height and forward-backward. If the user has sufficient trunk control, the thoracic support can be removed.

Birch plywood table

designed for educational purposes and for supporting upper limbs, can be removed to facilitate upper limb and trunk exercises. Height, inclination and forward-backward adjustment.

Knee supports

with removable, washable padding and with holes for patella discharge. Independent height, forward-backward, rotation and abductive adjustments.

Heel stops width and depth adjustments.

Birch plywood platform

height adjustments.

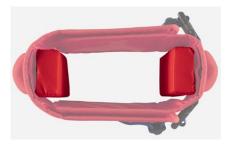

Twin swivel wheels

75 mm diameter, all with brakes. The wheels allow movement from one room to another, even during use.

other Components

944 Circumference reducers each 3 cm thick, can be inserted into supports for thinner users.

865 Multiadjustable headrest with height, inclination and forward-backward adjustment knobs.

Dondolino sizes and weight

A: base encumbrance

B: length encumbrance

C: platform to table height

D: overall width

E: platform to knee pads height

F: platform to pelvic support height

G: platform to thoracic support height

L: circumference of supports

M: user height

P: frame inclination

Make sure that measures F and G indicated in the figure do not exceed the suggested range indicated for the supports.

A special thanks to the families who participated with enthusiasm in our project. It is thanks to our customers and their stories that we find the energy and stimuli to evolve day by day.
